Management Sciences

Project Goals

1. Track every item and variant
2. Approve every change
3. Detect drift automatically
4. Audit-ready in seconds

194	73	12	6	104
tracked items	real Pixel 7 builds	phone variants	drift rules	tests passing

What is the CCD?

A web dashboard that shows **what is inside every Pixel 7 variant** and raises an alarm when anything **changes without approval**.

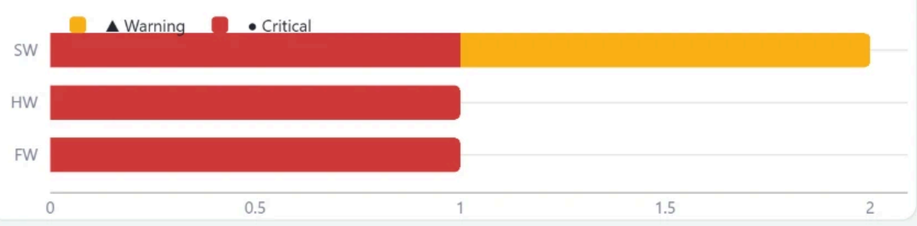

- Register of all parts
- Approved baselines
- Change requests (Jira)
- Drift alerts
- Compatibility check
- One-click audit report

Overview

Is the Pixel 7 configuration healthy right now? Every number links to the page that lists it.

CIs	Active baseline	Open ECRs	● Critical	▲ Warning	Compliance
194	MB-2026-09	0	3	1	97.8%

Open findings by CI category

severity	rule_type	ci_id	status	variant	actual_version
Critical	unauthorized_change	HW-011	Unauthorized	all	E
Critical	unauthorized_change	SW-001	Unauthorized	G03Z5-JP-128	CP2A.260705.006
Critical	unauthorized_change	FW-002	Unauthorized	all	g5300q-260604-260807-b-1610000
Warning	variant_inconsistency	SW-001	Unauthorized	G03Z5-JP-128	CP2A.260705.006

Sync status per source

Live demo: an unapproved firmware change is caught instantly: **3 Critical** **1 Warning**

How It Works

APPROVED baseline + **ACTUAL** GitHub, PLM + **AUTHORIZED** Jira ECRs

✓ Match: compliant

● Mismatch: alarm

Google builds · AOSP · Bulletins · GitHub · Jira · PLM (mock)

Sync → Database → Engine → Dashboard

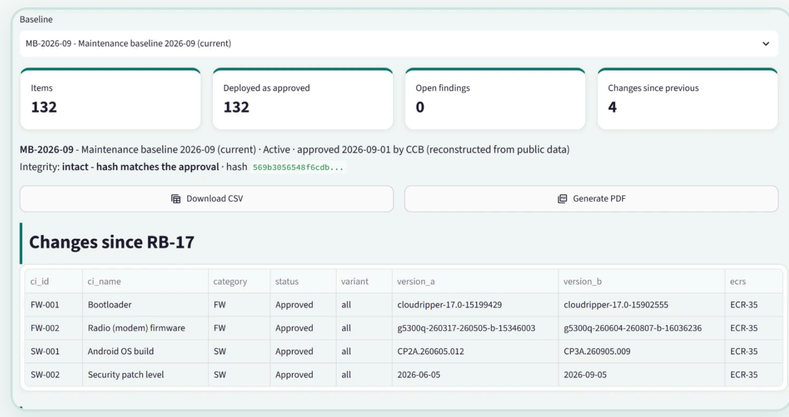

Inside the Dashboard

Variant Matrix
Red = differs from approved

Compatibility Checker
Blocks builds that don't fit

Audit Report
CSV and PDF in one click

Project Plan

1. Research
2. Data & Sync
3. Engine
4. Dashboard
5. Testing

✓ All phases complete

Deliverables

- ✓ 8-page dashboard
- ✓ Live data sync
- ✓ Drift detection
- ✓ Audit reports

Built With

Python · Streamlit · FastAPI · SQLAlchemy · Plotly · GitHub API · Jira API

Public-data case study: real Google/AOSP data; part numbers and approvals are mocked.
